## NAB 2011 EXHIBITOR PREVIEW

### Artel Video Systems – Booth #N6129

#### Key Product and Technology Demos

At the 2011 NAB Show, Artel Video Systems will present the latest advancements in its flagship product line, the DL4000 – a modular platform that enables the most reliable and easy-to-deploy solutions for critical video-over-fiber applications. Artel's selection of durable and flexible technologies is the clear answer for the systems designer who needs to guarantee throughput or the engineer who needs simplicity, easy access and reliability.

**DLT710 – Multi-format signal generator and tester**

This multipurpose module is the ideal, inexpensive solution for verification and monitoring of all common video rates and formats. Its unique, innovative design characteristics, focused on simplicity and reliability, enable the simultaneous, automatic verification of multi-format video links. The clear "go / no-go" indication it provides makes the DLT710 perfect for circuit verification, pre-installation equipment verification or installed circuit analysis.

**DLC410 – Video-over-IP Gateway**

The newest addition to the DL4000 arsenal is the DLC410, which enables ASI and SDI video to be transported over managed IP networks – a first for this platform. With technology based on SMPTE 2022 for encapsulation and forward error correction, the DLC410 can send two bi-directional video streams across a single Gig-E connection.

**Technology Preview – New, larger modular chassis**

NAB 2011 will mark the debut of a new, 12-slot chassis that supplements the Artel product line and increases the available choices. The larger chassis will include Artel's signature front-panel BNC connectors and LED indicators for ease-of-use and will triple the overall capacity within a single frame.

**Company Overview:**

Artel Video Systems develops, manufactures, and markets high performance, broadcast-quality video transport hardware for critical applications and is a recognized leader in video-over-fiber optics applications. Since its founding in 1981, Artel solutions have been selected by some of the largest telecommunication companies, video service providers, cable TV operators and broadcasters for critical contribution, backhaul and local access applications that require the highest levels of flexibility, dependability and ease of deployment.
